Air Quality Index (AQI) Values	When the AQI is in the range, it means:	AIRPOP recommended effective usage hours
0 - 50	The air condition is considered satisfactory, and air pollution poses little or no risk.	Up to 40 hours
51 - 100	The air condidtion is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.	Up to 40 hours
101 - 150	Members of sensitive groups may experience health effects. The general public is not likely to be affected.	Up to 40 hours
151 - 200	Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects.	Up to 30 hours
201 - 300	Health alert: everyone may experience more serious health effects.	Up to 15 hours
301 - 500	Health warnings of emergency conditions. The entire population is more likely to be affected.	Up to 15 hours

*Effective Life Expectance is defined here to mean minimum duration of filter performance in its appropriate context-of-use. To determine the effective minimum lifespan as ⩾ 40 Hours in a consumer setting, following test conditions are met:

1. Use a constant air flow @85L/min loaded with NaCl aerosole @200+/- 5mg to blow through the DUT mask / filter (see Table – 1);
2. Constant measurement at an interval of 77 seconds for two key indicative parameters:
   - filtration efficiency no less than 99.3%
   - inhale pressure drop no more than 175pa

Provided the measurements are within the parameters for NIOSH N95 and GB2626-2006 standards as per slide 6, the mask is considered performing to the required filtration and pressure drop standards. Other mask brands may quote alternative rates and calculation methods.
